

An informed patient is a satisfied patient™

The Patient Education Institute is the creator of X-Plain, a series of evidence-based health education software. X-Plain was translated to Arabic under the registered trademark “Mufasser”. X-Plain was developed to reach the widest possible audience and plug into existing healthcare hardware and software applications to automatically deliver and chart education activity.

The benefits and ROI from patient education are well established:

- Enhance medical outcomes and patient compliance
- Manage risk and expectations
- Increase patient satisfaction
- Meet accreditation standards
- Increase visibility of the healthcare institution

The unique features of X-Plain ensure that you realize the maximum ROI and the known patient education benefits. Using engaging multimedia with interactive questions and feedback, X-Plain ensures your patients comprehend their patient education.

X-Plain (www.x-plain.com) is unique because it:

- Verifies comprehension
- Documents usage **and** completion
- Provides important metrics for measuring ROI and patient satisfaction
- Integrates easily with existing technologies and established electronic medical records

Studies show that the majority of printed materials and videos provided to patients are not read, understood, or completed. The benefits of patient education are achieved only if your patient education materials are being used **and** understood by patients and their families. The engaging X-Plain tutorials, which include questions and feedback, ensure patients and their families comprehend their health education.
